Publication from our collaborator in The University of Chicago

An article that described T cell receptors (TCR) analysis has been published in Bone Marrow Transplantation by Drs. Poh Yin Yew (her present address is at OTS) and Yusuke Nakamura, our collaborators in The University of Chicago. This article reported the unique immune signatures in the patients with graft-versus-host disease (GVHD) or those with relapse of leukemia after hematopoietic stem cell transplantation (HSCT). OTS has introduced this TCR analysis platform from Dr. Nakamura's laboratory and started TCR analysis service business. OTS will further accelerate the development of TCR analysis with a group in The University of Chicago and its commercialization to contribute to cancer immunotherapy as well as other medical research areas including autoimmune diseases, food allergy, and drug hypersensitivity.

The paper was published on line in the journal.
